User Manual

How to use app to create Kataho plate?

Open Kataho and stand in front of your door (open sky) to get a better GPS signal.

Click on Create button and Select House Address Plate.

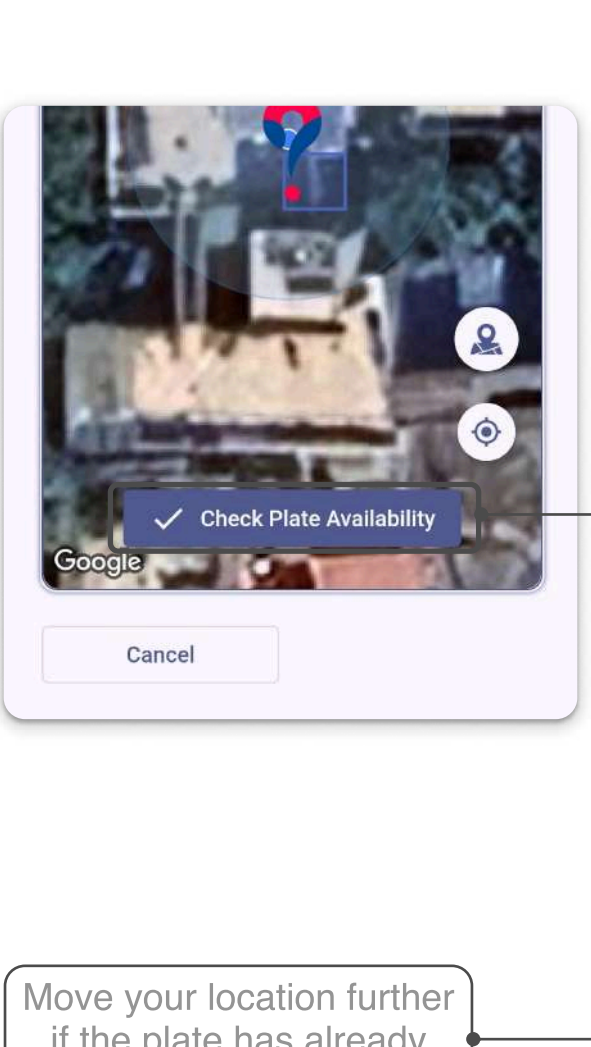

Shows the current selected address.

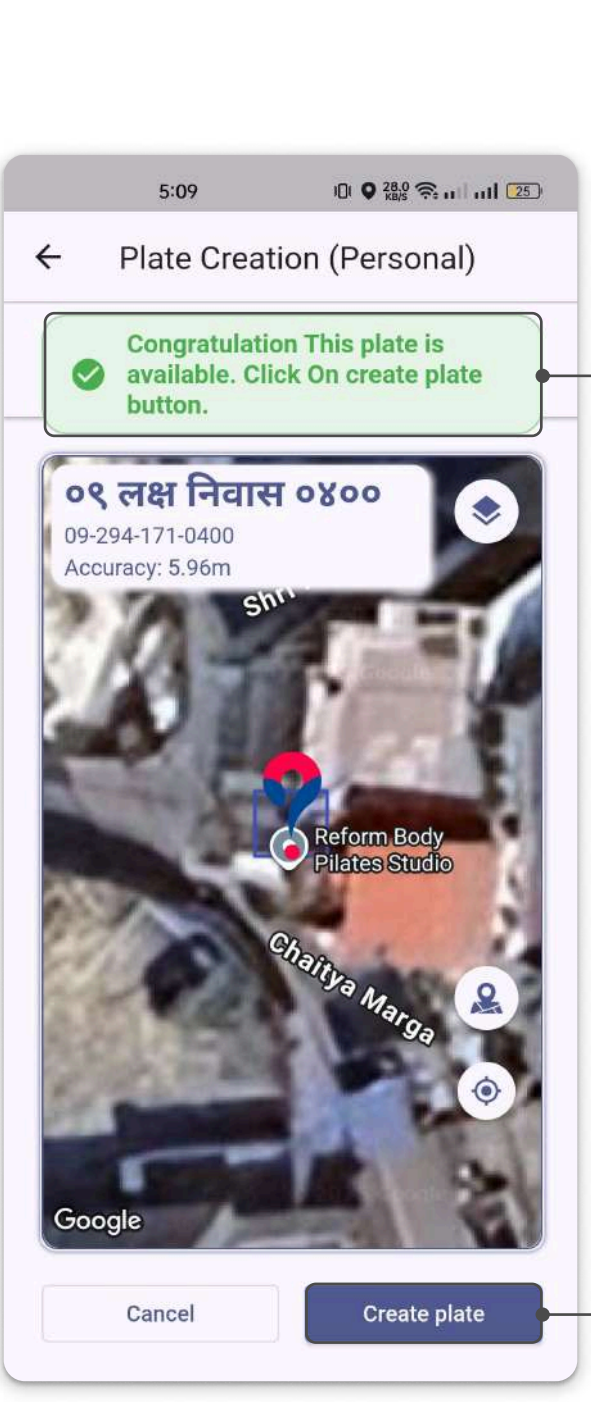

Use the kataho icon to pinpoint your house address. Zoom and Make sure to keep the address as close as 10m.

Check if the plate is available in your preferred location.

Move your location further if the plate has already been created on that grid.

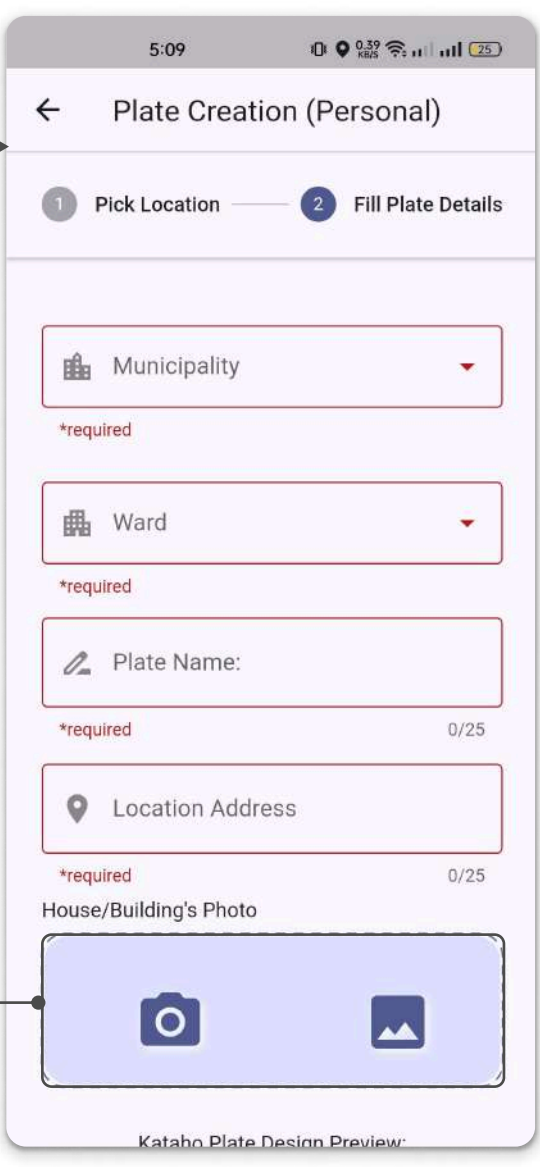

You will be notified if the plate is available on your selected location.

Click on **Create plate** and proceed forward.

Fill up the form with required information.
Note: Please enter all the required details in each field.

Capture and upload the image of the house or building.

Click on **Create kataho plate** and get your own kataho house address plate.
